

Shopify Listing Workflow

Quick Reference: Amazon Export → Cowork → Shopify

Strokes and Barrels · Last updated May 2026

1. Amazon Export: Which File & How Often

Which report to download

Go to **Seller Central** → **Reports** → **Inventory Reports**. Download the **"Active Listings Report"** (TXT, tab-delimited). This is the authoritative source for ASIN, SKU, title, and product data. Do not use the Business Report or the Orders report — those don't contain catalog fields.

Field in export	Maps to in Cowork
item_name	Amazon Title (context for AI)
asin1	ASIN (dropdown key)
seller-sku	SKU
item-description	Description (context)
bullet-point-1–5	Key Features (context)
price	Reference price

How often to refresh

- **New products:** Run the export and update amazon-catalog.csv same day you list on Amazon.
- **Existing products:** Re-export monthly to catch title edits, bullet updates, or price changes.
- **Before a campaign:** Pull a fresh export to make sure copy reflects any A/B test winners on the Amazon side.

Updating amazon-catalog.csv

Open the Active Listings Report in Excel. Keep only these columns and save as CSV to your Cowork workspace folder:

ASIN, SKU, Title, Description, Key Features, Category

The artifact reads this exact column order. Adding extra columns is fine — they'll be ignored.

2. The Cowork Prompt That Worked Best

The generator artifact handles prompting automatically, but here's the exact prompt it sends for a full listing generation — useful if you want to run it manually or tweak the brand voice:

Full-listing prompt (sent once, returns all fields as JSON)

You are a copywriter for Strokes and Barrels, a direct-to-consumer golf brand.
Voice: irreverent, premium, golf-meets-tech, playful — never stuffy or corporate.
Think clever golf insider who also geeks out on product details.

Generate a complete Shopify listing for this product.
Return ONLY raw JSON — no markdown fences, no explanation.

```
Amazon Title: {title}
ASIN: {asin}
Category: {category}
Description: {description}
Features: {features}

Required JSON shape:
{
  "title": "max 70 chars, punchy and SEO-friendly",
  "description": "3 paras separated by \n\n. Para 1: hook.",
  "bullets": ["benefit 1", "benefit 2", "benefit 3", "benefit 4", "benefit 5"],
  "altText": "1-2 sentences, descriptive and SEO-friendly",
  "keywords": ["kw1", "kw2", "kw3", "kw4", "kw5", "kw6", "kw7", "kw8"],
  "price": "$XX.XX"
}
```

Key prompt decisions and why they worked

- **Brand voice in the system role:** Defining it once at the top prevents the AI defaulting to generic e-commerce tone.
- **"Return ONLY raw JSON":** Suppresses markdown fences and preamble, which break parsing.
- **Para 1 = hook instruction:** Without this, descriptions open with a generic product summary. The hook instruction forces personality first.
- **Separate paragraphs with \n\n:** Gives clean split points for rendering and copying into Shopify's description field.
- **Per-field regeneration uses a tighter prompt:** When regenerating one field, the prompt drops the JSON wrapper and asks only for that field's output, which is faster and less likely to drift.

3. Using listings-master.xlsx for Shopify Import

Shopify's product import requires a specific CSV format. The `xlsx` is your content master — you'll do a quick column remap before importing.

Step 1: Export `xlsx` to CSV

1. Open `listings-master.xlsx` in Excel or Google Sheets.
2. File → Download / Save As → CSV (comma-separated).
3. Save as `listings-import.csv`.

Step 2: Map columns to Shopify's template

Shopify's importer expects specific column names. Rename your headers to match:

Your column	Shopify column name
Shopify Title	Title
Description (3 paras)	Body (HTML)
Suggested Price	Variant Price
ASIN	Tags (prefix: asin:)
SEO Keywords	Tags (append, comma-sep)
Bullet 1–5	No direct field — paste into Body (HTML) as <code></code>

Step 3: Add required Shopify fields

Shopify's importer also needs a few fields the xlsx doesn't have. Add these columns:

- **Handle:** URL-friendly slug, e.g. baby-pink-golf-towel. Must be unique per product.
- **Vendor:** Strokes and Barrels
- **Published:** FALSE — keep listings unpublished until reviewed (see Section 4).
- **Variant Inventory Qty:** Enter current stock count.
- **Image Src:** URL or local path to the main product image.
- **Image Alt Text:** Copy from the Alt Text column.

Step 4: Import in Shopify

4. Go to Shopify Admin → Products → Import.
5. Upload listings-import.csv.
6. On the field mapping screen, match any columns Shopify didn't auto-detect.
7. Run import — products land as Drafts (because Published = FALSE).
8. Review each draft before setting to Active (see Section 4).

4. Pre-Publish Review Checklist

Check these for every listing before flipping it to Active in Shopify. The table below is the order to work through it:

	Check	What to look for
	Title length	Must be ≤ 70 characters. The artifact flags overruns in red — fix before importing.
	Price sanity	Compare to the Amazon price. Shopify price should be equal or higher to protect your Amazon listing rank.
	Brand voice	Read the description aloud. If it sounds like a press release or a spec sheet, regenerate it.
	Bullet accuracy	Every claim must be true. Remove or soften anything that overpromises (e.g. "best on the market").
	Keyword relevance	Scan the 8 keywords. Remove any that don't match what a real customer would search. No keyword stuffing.
	Image + alt text	Confirm the main image is uploaded and the alt text describes it accurately. Alt text matters for accessibility and image SEO.
	Tags & collections	Assign the product to the right Shopify collection (Towels, Ball Markers, etc.) so it surfaces in navigation.
	Inventory count	Set the correct stock quantity. Don't publish with 0 inventory unless you're using "continue selling when out of stock".
	SEO preview	In Shopify, scroll to the Search Engine Listing section. Check the meta title and meta description look clean in the preview.
	Mobile preview	Click Preview and switch to mobile view. Confirm the description and bullets render correctly on a phone screen.

When all 10 checks pass, change the listing status from Draft to **Active**.
